

A 9x9 grid for a logic puzzle. The grid is divided into 3x3 sub-grids by thick black lines. Numbers are placed in some cells, and circles are placed in others. Arrows point from some numbers to circles, indicating that the number is the count of circles in that row, column, or sub-grid. For example, in the top-left sub-grid, the number 4 is in the top-left cell, and there are four circles in that sub-grid. The puzzle is to determine the numbers in the empty cells based on these clues.
