

The image shows a 10x10 grid. Thick black lines are drawn at the following intervals (assuming the top-left corner is (0,0) and the bottom-right is (10,10)):

- Vertical lines at x=0, x=3, x=5, x=6, x=8, and x=10.
- Horizontal lines at y=0, y=2, y=3, y=4, y=6, y=7, y=8, and y=10.

These thick lines create a series of rectangles of various sizes. The remaining grid cells, which are not part of these thick-lined rectangles, are defined by thin gray lines.
